Metadata requirements for OpenURLs sent to the CDL SFX server

2/14/02 Margery Tibbetts; rev. June 2006

To support CDL’s Request service (automatic generation of ISO Interlibrary Loan requests); the capture of article citations for use in bibliographies; and e-content links at the article level the CDL SFX server needs to receive a comprehensive set of metadata data in the OpenURL from the source service (A&I vendor).

1. In the Origin-Description we need a database specific **sid** value.

2. In the Object-Metadata zone the elements are:
   - issn; isbn
   - aulast
   - aufirst; auinit; auinit1; auinitm
   - title;
   - atitle
   - volume
   - issue
   - pages; spage; epage
   - date
   - genre

3. In the Local-Identifier zone the elements are:
   - publisher
   - placeOfPublication
   - edition
   - seriesTitle
   - conferenceTitle
   - conferenceDate
   - reportNumber
   - dissertationNumber

Examples are provided on the following page.
